

HARSHIT TEOTIA

Python Developer | Backend Engineer | AI/LLM Systems

harshitteotia2003@gmail.com | +91-6397105986 | LinkedIn | Portfolio

Professional Summary

Python Backend Developer with 1+ year of experience building production-oriented APIs, business workflows, and AI-enabled systems using **Python, FastAPI, PostgreSQL, and asynchronous architectures**. Experienced in REST API design, database modeling, authentication/RBAC, workflow state management, document processing, RAG pipelines, vector search, and LLM integration. Built backend systems across finance, hospitality, marketing automation, and FMCG distribution domains with a focus on scalable architecture, testing, and reliable business logic.

Technical Skills

Languages: Python, SQL, JavaScript

Backend: FastAPI, REST APIs, Async Programming, Pydantic, API Integration

Databases: PostgreSQL, MySQL, SQLAlchemy

AI/LLM: Google ADK, LangChain, LangGraph, RAG, LLMs, AI Agents, Prompt Engineering, Qdrant, Embeddings

Frontend: React.js, HTML, CSS, Tailwind CSS

Tools & Testing: Git, GitHub, Postman, Redis, Celery, AWS S3, Pytest

Security: JWT, RBAC

Experience

Vrozart Group

May 2025 – Present

Python Developer

Mohali, Punjab

- Develop and maintain **FastAPI REST services** for finance, hospitality, and business platforms, implementing API contracts, Pydantic validation, PostgreSQL data models, business logic, and workflow state management.
- Built secure backend workflows using **JWT authentication, RBAC, role-based authorization, async APIs**, structured error handling, and database-driven business rules across multiple application modules.
- Developed AI-enabled finance workflows integrating **OCR, Tesseract, PDFPlumber, Celery, S3, embeddings, Qdrant, and RAG** for document extraction, chunking, vector retrieval, and downstream AI processing.
- Integrated **LLM/Google ADK workflows** with backend services to process natural-language customer inputs into structured information while keeping validation, business rules, workflow progression, and application state under backend control.
- Developed backend modules for the **HAUT hospitality platform**, supporting bookings, POS, KDS, QR ordering, inventory, purchasing, billing, payments, employee management, and role-based access across multiple client applications.
- Contributed to a **multi-tenant FMCG distribution ERP**, implementing domain modules, permission-controlled workflows, PostgreSQL persistence, asynchronous SQLAlchemy services, database migrations, and integration testing.

Selected Projects

Vrozart Finance — AI Finance & Lending Platform

Python, FastAPI, Qdrant, Celery, S3

- Built document-processing pipelines using **OCR, Tesseract, PDFPlumber, embeddings, and Qdrant** for document extraction, chunking, vector retrieval, and RAG workflows.
- Integrated **Celery** background processing and S3 document storage with FastAPI services to support AI-assisted finance and lending workflows.

HAUT — Hospitality Management & Booking Platform

Python, FastAPI, PostgreSQL, Redis

- Developed backend services for a B2B hospitality platform covering **bookings, POS, KDS, QR ordering, inventory, purchasing, billing, payments, and employee management**.
- Implemented **REST APIs, authentication, RBAC, validation, business workflows, and asynchronous operations** with PostgreSQL-backed data models supporting web, mobile, POS, and KDS clients.

Van Sales & Distribution ERP

Python, FastAPI, PostgreSQL, SQLAlchemy

- Designed and delivered backend modules for a **multi-tenant, multi-branch ERP** covering purchasing, inventory, van loading, routes, promotions, accounting periods, and sales-order workflows.
- Implemented **RBAC, permission-controlled workflows, state transitions, audit logging, PostgreSQL migrations, and asynchronous SQLAlchemy services**.
- Delivered **18 database migrations, 176+ automated tests, and 9 business modules**; diagnosed and fixed a systemic async SQLAlchemy **MissingGreenlet** issue through root-cause analysis and real HTTP/PostgreSQL regression testing.

Viblets — AI Marketing Automation Platform

Python, FastAPI, Google ADK, PostgreSQL

- Built an agent-driven backend using **Python, FastAPI, and Google ADK** to process customer information and orchestrate automated marketing workflows.
- Integrated **Facebook Business APIs** to connect customer accounts, retrieve Business Account data, and persist external platform information through backend workflows.

Education

Chandigarh University

Master of Computer Applications (MCA)

Artificial Intelligence & Machine Learning

2023 – 2025

Punjab, India

Meerut Institute of Technology

Bachelor of Computer Applications (BCA)

Computer Science

2020 – 2023

Meerut, India
